Customer Problem Statement Template

The Laptop Request Process project focuses on simplifying and automating the process of requesting and allocating laptops within an organization using ServiceNow. Employees can submit laptop requests through a self-service catalog, eliminating manual paperwork and email-based communication. The system automatically routes requests for approval, creates fulfillment tasks for the IT team, tracks request status, and notifies users throughout the process. This automation improves efficiency, reduces processing delays, ensures transparency, and enhances user satisfaction while maintaining proper asset management and compliance.

Aspect	Description in context of our project	
 I am		We are ServiceNow developers and IT automation enthusiasts working on building an automated Laptop Request Process solution.
 I'm trying to		Build a streamlined way for employees to request laptops and automate the approval, asset allocation, delivery, and notification process.
 But		Currently, the laptop request process is manual and time-consuming, leading to delays, approval bottlenecks, and lack of transparency.
 Because		Requests are managed through emails, spreadsheets, and manual coordination between managers, IT support teams, and asset management teams, with no centralized tracking or automation.
 Which makes		The solution valuable by providing faster request processing, automated approvals, accurate asset allocation, real-time tracking, improved transparency, reduced manual effort, and higher employee satisfaction.
