Maximum Marks	2 Marks

Problem – Solution Fit

The Laptop Request Process project focuses on addressing the challenges faced by employees, managers, and administrators during laptop procurement and allocation within an organization. In many organizations, laptop requests are handled through emails, phone calls, spreadsheets, or manual paperwork, which often leads to delays, lack of transparency, approval bottlenecks, and poor tracking of request status.

The proposed solution uses the ServiceNow platform to automate the complete laptop request lifecycle. Employees can submit requests through the Service Catalog, managers can approve or reject requests through an automated workflow, records are created automatically, and notifications are sent to relevant stakeholders. This reduces manual effort and improves process efficiency.

Purpose

1. Solve customer problems effectively

- Eliminate manual handling of laptop requests.
- Reduce delays in approval and processing.
- Improve visibility into request status.

2. Increase solution adoption

- Provide a simple self-service portal for employees.
- Enable automated workflows through ServiceNow.
- Ensure users can easily submit and monitor requests.

3. Improve communication

- Send automated notifications for request submission, approval, and completion.

- Keep employees and managers informed throughout the process.

4. Build trust and transparency

- Provide a standardized request process.
- Maintain accurate request records and approval history.
- Reduce dependency on emails and manual follow-ups.

5. Understand and improve the existing situation

- Existing Process:
 - Laptop requests are managed manually.
 - Approvals are handled through email communication.
 - Tracking request progress is difficult.
 - Status updates are not always available.
- **Improved Process:**
 - Employees submit requests through ServiceNow Service Catalog.
 - Requests are automatically routed for approval.
 - Records are created and maintained automatically.
 - Notifications are sent at each stage of the workflow.
 - Request progress is transparent and traceable.

Problem – Solution Fit Template

Project Title: Laptop Request Process

Date: 15 February 2025

Prepared By: Navya Pothala

Version: 1.0

PURPOSE

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

1. PROBLEM

1.1 Customer Segment

- Employees who require laptops for official work.
- Managers who approve laptop requests.
- IT Support Team responsible for processing requests.
- System Administrators managing the ServiceNow platform.

1.2 Problem Statement

The laptop request process in many organizations is handled manually through emails, spreadsheets, and phone calls. This leads to delays in approvals, poor tracking of request status, and increased administrative effort.

1.3 Current Impact

- Delayed laptop allocation to employees.
- Lack of transparency in request status.
- Increased manual work for managers and administrators.
- Higher chances of errors and missed requests.
- Reduced employee productivity.

1.4 Existing Alternatives

- Email-based request submission.
- Spreadsheet-based request tracking.
- Manual approval processes.
- Phone or verbal communication.

Why they are not sufficient:

- Difficult to track requests.
- No centralized record management.
- Time-consuming and error-prone.
- Limited visibility into approval status.

1.5 Root Cause

- Lack of workflow automation.
- No centralized request management system.
- Manual approval and notification process.
- Absence of real-time request tracking.

2. SOLUTION

2.1 Proposed Solution

Develop a Laptop Request Process using ServiceNow that allows employees to submit laptop requests through the Service Catalog and automates approval, record creation, and notification activities using Flow Designer.

2.2 Key Features

- Laptop Request Catalog Item.
- Automated Request Submission.
- Manager Approval Workflow.
- Automatic Record Creation.
- Email/Notification Management.
- Centralized Request Tracking.
- Workflow Automation using Flow Designer.

2.3 Benefits to Customer

- Faster request processing.
- Reduced manual effort.
- Improved transparency.
- Better approval management.
- Accurate record keeping.
- Enhanced employee experience.

2.4 Unique Value

- Fully automated workflow within ServiceNow.
- Centralized management of laptop requests.
- Real-time notifications and status visibility.
- Easy configuration and maintenance using Flow Designer.

2.5 Success Measures

- Reduced request processing time.
- Faster approval completion.
- Increased user satisfaction.
- Reduced manual intervention.
- Successful workflow execution without errors.

3. EVIDENCE OF FIT

Evidence Type	Description	Source / Method	Key Findings
 Customer Feedback	Feedback from employees regarding laptop request delays	Discussions and observations	Employees prefer an automated request system
 Survey / Interviews	Requirement gathering from users and administrators	Informal interviews	Need for approval automation and tracking
 Prototype Testing	Testing the ServiceNow Laptop Request Flow	ServiceNow Workflow Studio	Flow executed successfully and created records
 Usage / Behavior Data	Analysis of manual request handling process	Existing organizational workflow	Manual process consumes more time and effort
